OBJECTIVE

Generative AI Machine Learning Engineer specializing in multi-agent systems, LLM-driven automation, and end-to-end AI solutions. Experienced in building scalable agentic workflows using LangGraph, Google ADK, and MCP tools, with strong expertise in RAG, real-time data retrieval, and cloud-native deployments. Skilled in developing production-ready AI systems that improve decision-making and operational efficiency

EXPERIENCE

TCS - Gen AI Engineer Jan 2025 - Present
Botf Oncall Agent Chennai, India

- Built an end-to-end GenAI-powered incident triage system using **Google ADK** and multi-agent workflows to analyze logs, detect failures, and generate resolution steps across large-scale microservices applications
- Integrated with **Confluence MCP server** to retrieve contextual data for impact analysis and improved decision-making during incident resolution
- Implemented real-time alerting using **Slack-based notifications**, reducing incident triage time by **30%**, and deployed the solution on **Cloud Run**

Ticket Resolution Agent

- Built a ticket resolution agent using **multi-agent workflows** to automate ticket analysis, root cause identification, and resolution generation
- Integrated with **ServiceNow** to ingest tickets and process them through sequential agents for structured analysis, retrieving relevant solutions using **RAG** with **cross-encoder re-ranking**
- Deployed the solution on **Google Kubernetes Engine (GKE)** to enable scalable and reliable execution of the workflow

SKILLS

Programming	Python, Java, SQL
AI/ML	Machine Learning, Deep Learning, Computer Vision, RAG, Fine-tuning
GenAI/LLMs	LangChain, LangGraph, Google ADK, MCP Tools
Frameworks/Tools	FastAPI, Flask, Hugging Face
Libraries	NumPy, Pandas, Scikit-learn, PyTorch, OpenCV, Matplotlib
Databases	PostgreSQL, MySQL, MongoDB, Pinecone
Cloud/DevOps	GCP, AWS, Docker, Kubernetes
Data	Apache Kafka, Google Pub/Sub
Tools	Git, GitHub, Bitbucket, VS Code, Jupyter, Postman

EDUCATION

Bachelor of Computer Science, JNTUA, Kalikiri 2020 - 2024

PROJECTS

Computer Vision Classification. Fine-tuned a **ResNet** model on a custom dataset for image classification, implementing data preprocessing, augmentation, and hyperparameter tuning to improve performance

Automated Loan Approval System. Developed a machine learning model to automate loan approvals, achieving **88% accuracy** using financial data, and strengthening skills in data preprocessing, EDA, and classification

Chatbot Application. Developed an internal chatbot for HR teams using **RAG** and **cross-encoder re-ranking** to deliver accurate, context-aware responses by retrieving and aggregating data from multiple sources
